Without them, this conference couldn't happen.

\$ whoami

Worked in a variety of roles throughout my career

Applied operational band-aids to keep systems going

Designed solutions from the ground up

Been in the ambulance at the bottom of the cliff

Have a range of leadership skills built up over time

On a mission to help embed security into organisations

Seen pain

Prolonged pain

Created pain

Felt pain

Managed pain

i.e. treat the root cause

A warm, dimly lit coffee shop interior. In the foreground, a stainless steel espresso machine sits on a counter, with steam rising from its group heads. Several white coffee mugs are lined up on the machine's top surface. To the left of the machine is a black coffee grinder, and to the right is another one. The background features a large blackboard with yellow text. Two glowing pendant lights hang above the counter. On the left, a menu board is partially visible.

A LONG TIME AGO
IN A COFFEE SHOP
FAR, FAR AWAY...

SECURITY

What is a control?

something that helps reduce the likelihood
or impact of a risk occurring

Control Categories

Preventative - avoids an incident by stopping activities occurring

Detective - identifies activities leading up to or during an incident

Recovery - enables you to return to BAU operations after an incident

Corrective - fixes after an incident has occurred (ideally before)

Deterrent - intended to discourage a potential attacker

Compensating - provides an alternative measure of control

Today, we are going to secure a.....
